

DW_bin2gray

Binary to Gray Converter

Version, STAR and Download Information: IP Directory

Features and Benefits

- Parameterized word length
- Inferable using a function call

Description

DW_bin2gray converts binary coded input `b` to Gray-coded output.

Table 1-1 Pin Description

Pin Name	Width	Direction	Function
b	*width* bit(s)	Input	Binary coded input data
g	*width* bit(s)	Output	Gray coded output data

Table 1-2 Parameter Description

Parameter	Values	Description
width	≥ 1	Input word length

Table 1-3 Synthesis Implementations

Implementation Name	Function	License Feature Required
str	Synthesis model	DesignWare

Table 1-4 Simulation Models

Model	Function
DW01.DW_bin2gray_cfg_sim	Design unit name for VHDL simulation
dw/dw01/src/DW_bin2gray_sim.vhd	VHDL simulation model source code
dw/sim_ver/DW_bin2gray.v	Verilog simulation model source code

Reflected binary Gray code sequences can be constructed iteratively starting with the simplest two element sequence of 0 and 1. Refer to Figure 1-1 on page 2. Each iteration doubles the sequence by concatenating the

previous sequence with a reversed (reflected) copy of itself. In addition, a new Most Significant Bit (MSB) is added to each element with its value being 0 for the forward copy and 1 for the reflected copy.

HDL Usage Through Function Inferencing - VHDL

```
library IEEE, DWARE;
use IEEE.std_logic_1164.all;
use DWARE.DW_Foundation_arith.all;

entity DW_bin2gray_func is
  generic (func_width : positive := 8);
  port (func_b : in  std_logic_vector(func_width-1 downto 0);
        g_func : out std_logic_vector(func_width-1 downto 0));
end DW_bin2gray_func;

architecture func of DW_bin2gray_func is
begin
  -- function inference of DW_bin2gray
  g_func <= DWF_bin2gray (func_b);
end func;
```

HDL Usage Through Function Inferencing - Verilog

```
module DW_bin2gray_func (func_b, g_func);

  parameter func_width = 8;

  input  [func_width-1 : 0] func_b;
  output [func_width-1 : 0] g_func;

  // pass "width" parameters to the inference functions
  parameter width = func_width;

  // Please add search_path = search_path + {synopsys_root + "/dw/sim_ver"}
  // to your .synopsys_dc.setup file (for synthesis) and add
  // +incdir+$SYNOPSYS/dw/sim_ver+ to your verilog simulator command line
  // (for simulation).
  `include "DW_bin2gray_function.inc"

  // function inference of DW_bin2gray
  assign g_func = DWF_bin2gray (func_b);
endmodule
```

HDL Usage Through Component Instantiation - VHDL

```
library IEEE, DWARE;
use IEEE.std_logic_1164.all;
use DWARE.DW_Foundation_comp_arith.all;

entity DW_bin2gray_inst is
  generic (inst_width : positive := 8);
  port (inst_b : in  std_logic_vector(inst_width-1 downto 0);
        g_inst : out std_logic_vector(inst_width-1 downto 0));
end DW_bin2gray_inst;

architecture inst of DW_bin2gray_inst is
begin
  -- instance of DW_bin2gray
  U1 : DW_bin2gray
    generic map (width => inst_width)
    port map (b => inst_b,
              g => g_inst);
end inst;

-- pragma translate_off
configuration DW_bin2gray_inst_cfg_inst of DW_bin2gray_inst is
  for inst
  end for;
end DW_bin2gray_inst_cfg_inst;
-- pragma translate_on
```

HDL Usage Through Component Instantiation - Verilog

```
module DW_bin2gray_inst (inst_b, g_inst);

  parameter inst_width = 8;

  input  [inst_width-1 : 0] inst_b;
  output [inst_width-1 : 0] g_inst;

  // Please add +incdir+$SYNOPSYS/dw/sim_ver+ to your verilog simulator
  // command line (for simulation).

  // instance of DW_bin2gray
  DW_bin2gray #(inst_width)
    U1 (.b(inst_b),.g(g_inst));
endmodule
```
