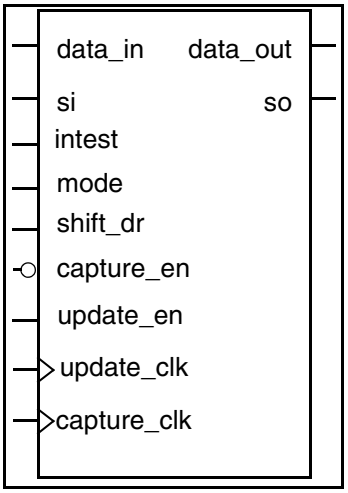
DW_bc_5

Boundary Scan Cell Type BC_5

Version, STAR and Download Information: IP Directory

Features and Benefits



- IEEE Standard 1149.1 compliant
- Synchronous or asynchronous scan cells with respect to `tck`
- Supports the standard instructions: EXTEST, SAMPLE/PRELOAD, and BYPASS
- Supports the optional instructions INTEST, RUNBIST, CLAMP, and HIGHZ

Description

DW_bc_5 is a boundary scan cell used to control the output enable for a three-state output buffer when a signal received form an IC input pin is used only as an output enable. DW_bc_5 combines the functions of an input cell and an output cell. The Boundary Scan Description Language (BSDL) description of this cell is of type BC_5 described in the BSDL package STD_1149_1_1990.

The DW_bc_5 cell may be synchronous or asynchronous with respect to `tck` (Test Clock system pin), depending on the port connections.

Table 1-1 Pin Description

Pin Name	Width	Direction	Function
capture_clk	1 bit	Input	Clocks data into the capture stage
update_clk	1 bit	Input	Clocks data into the update stage
capture_en	1 bit	Input	Enable for data clocked into the capture stage, active low
update_en	1 bit	Input	Enable for data clocked into the update stage, active high
shift_dr	1 bit	Input	Enables the boundary scan chain to shift data one stage toward its serial output (tdo)
mode	1 bit	Input	Determines whether data_out is controlled by the boundary scan cell or by the `data_in` signal
intest	1 bit	Input	INTEST instruction signal
si	1 bit	Input	Serial path from the previous boundary scan cell
data_in	1 bit	Input	Input data from system input pin

Table 1-1 Pin Description (Continued)

Pin Name	Width	Direction	Function
data_out	1 bit	Output	Output data
so	1 bit	Output	Serial path to the next boundary scan cell

Table 1-2 Synthesis Implementations

Implementation Name	Function	License Feature Required
str	Synthesis model	DesignWare or Test-IEEE-STD-1149-1

The `mode` signal gives the Test Access Port (TAP) instructions control of the boundary scan cell. Table 1-3 lists the required values of the `mode` signal for each of the TAP instructions that DW_bc_5 supports.

Table 1-3 Mode Signal Generation for DW_bc_5

Instruction	Mode for Output Cell
EXTEST	1
SAMPLE/PRELOAD	0
INTEST	1[a]
CLAMP	1
RUNBIST	1[a]
BYPASS	0

a. If you do not want these instructions to drive the output pins with pre-loaded data held in the boundary scan register, then these instructions are not needed to determine the state of the `mode` signal. Instead, the instruction must be added to the output enable logic to force every system output pin to an inactive drive state.

Table 1-4 lists the connections for asynchronous boundary scan chains.

Table 1-4 Simulation Models

Model	Function
DW04.DW_BC_5_CFG_SIM	Design unit name for VHDL simulation
dw/dw04/src/DW_bc_5_sim.vhd	VHDL simulation model source code
dw/sim_ver/DW_bc_5.v	Verilog simulation model source code

Table 1-5 lists the connections for synchronous boundary scan chains.

Table 1-5 Port Connections for Asynchronous Boundary Scan Chains

DW_bc_5 Port Name	Connection
capture_clk	clock_dr from TAP controller
update_clk	update_dr from TAP controller
capture_en	Logic zero
update_en	Logic one
shift_dr	shift_dr from TAP controller
mode	Mode generation logic
si	so from previous boundary scan cell
intest	INTEST signal from the instruction decoder
data_in	System input pin for input cells or IC output logic for output cells
data_out	IC input logic for input cells or system output pin for output cells
so	si of next boundary scan cell

Table 1-6 Port Connections for Synchronous Boundary Scan Chains

DW_bc_5 Port Name	Connection
capture_clk	tck from system pin
update_clk	tck_n from system pin
capture_en	sync_capture_en from TAP controller
update_en	sync_update_dr from TAP controller
shift_dr	shift_dr from TAP controller
mode	Mode generation logic
si	so from previous boundary scan cell
intest	INTEST signal from the instruction decoder
data_in	System input pin for input cells or IC output logic for output cells
data_out	IC input logic for input cells or system output pin for output cells
so	si of next boundary scan cell
