

# DW02\_mult\_5\_stage

## Five-Stage Pipelined Multiplier

Version, STAR and Download Information: [IP Directory](#)

### Features and Benefits

- Parameterized word length
- Unsigned and signed (two's-complement) data operation
- Five-stage pipelined architecture
- Automatic pipeline retiming

### Description

DW02\_mult\_5\_stage is a five-stage pipelined multiplier. DW02\_mult\_5\_stage multiplies the operand A by B to produce a product (PRODUCT) with a latency of four clock (CLK) cycles.

**Table 1-1 Pin Description**

Pin Name	Width	Direction	Function
A	<i>A_width</i> bit(s)	Input	Multiplier
B	<i>B_width</i> bit(s)	Input	Multiplicand
TC	1 bit	Input	Two's complement 0 = unsigned 1 = signed
CLK	1 bit	Input	Clock
PRODUCT	<i>A_width</i> + <i>B_width</i> bit(s)	Output	Product ( $A \times B$ )

**Table 1-2 Parameter Description**

Parameter	Values	Description
<i>A_width</i>	$\geq 1$	Word length of A
<i>B_width</i>	$\geq 1$	Word length of B

**Table 1-3 Synthesis Implementations**

Implementation Name	Function	License Feature Required
str	Booth-recoded Wallace-tree synthesis model	DesignWare

Table 1-4 Simulation Models

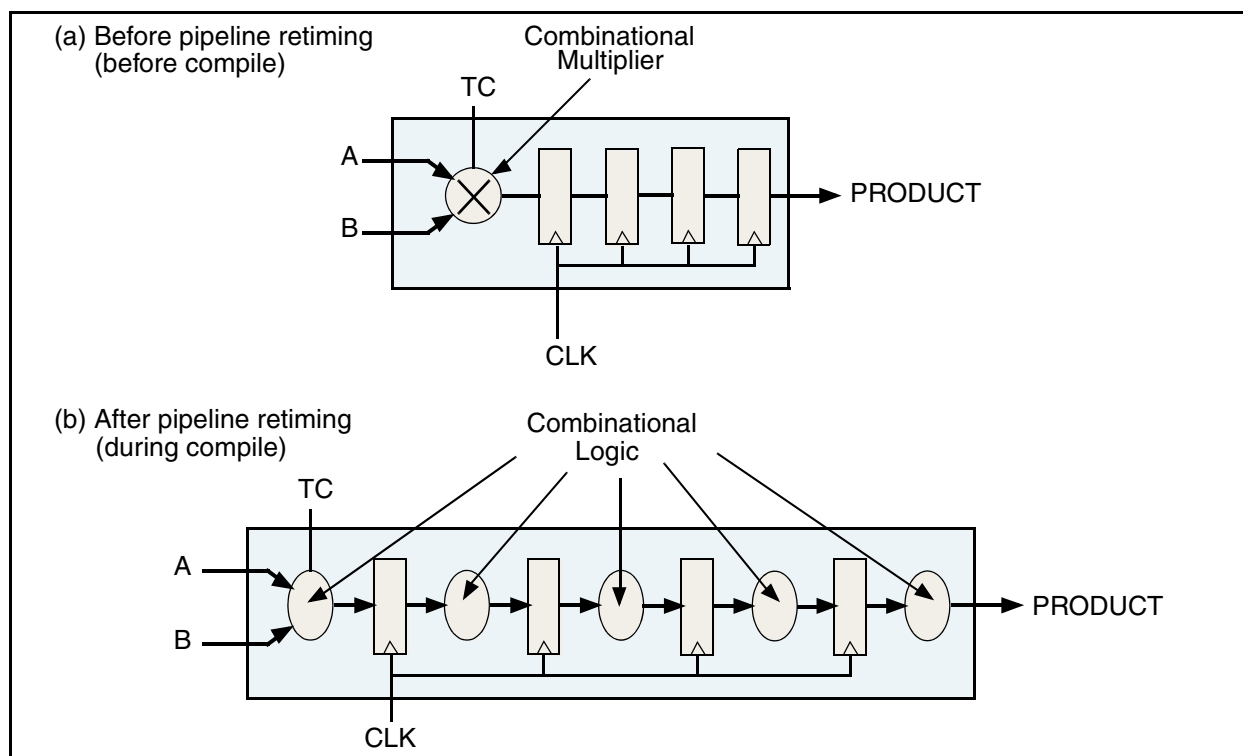

Model	Function
DW02.DW02_MULT_5_STAGE_CFG_SIM	Design unit name for VHDL simulation
dw/dw02/src/DW02_mult_5_stage_sim.vhd	VHDL simulation model source code
dw/sim_ver/DW02_mult_5_stage.v	Verilog simulation model source code

The control signal, TC, determines whether the input and output data is interpreted as unsigned (TC=0) or signed (TC=1) numbers.

Automatic pipeline retiming ensures optimal placement of pipeline registers within the multiplier to achieve maximum throughput.
